2 Important Safety Information

2.1 Important Safety Instructions and Protective Measures

The following safety instructions must be respected in all operating and installation phases of the device. Non-observance of safety instructions, or rather special warnings and operating instructions in product manuals, violates safety standards, manufacturer instructions and proper usage of the device. Meinberg Funkuhren shall not be responsible for any damage arising due to non-observance of these regulations.

Depending on your device or the installed options
some information is not valid for your device.

If a procedure is marked with the following signal words, you may only continue, if you have understood and fulfilled all requirements. In this documentation dangers and indications are classified and illustrated as follows:

![DANGER!]
The signal word indicates an imminently hazardous situation with a high risk level. This notice draws attention to an operating procedure or similar proceedings, of which a non-observance may result in serious personal injury or death.

![WARNING!]
The signal word indicates a hazard with a medium risk gradient. This notice draws attention to an operating procedure, a procedure or the like which, if not followed, can lead to serious injuries, possibly resulting in death.

![CAUTION!]
The signal word indicates a hazard with a low risk gradient. This notice draws attention to an operating procedure, a procedure or the like which, if not followed, can lead to minor injuries.

![ATTENTION!]
This notice draws attention to an operating procedure, a procedure or the like which, if not followed, can cause damage to the product or loss of important data.
2.2 Used Symbols

The following symbols and pictograms are used in this manual. To illustrate the source of danger, pictograms are used, which can occur in all hazard classes.

<table>
<thead>
<tr>

</tbody>
</table>
The manuals for a product are included in the scope of delivery of the device on a USB stick. The manuals can also be obtained via the Internet. Enter www.meinbergglobal.com into your browser, then enter the corresponding device name in the search field at the top.

This manual contains important safety instructions for the installation and operation of the device. Please read this manual completely before using the unit.

This device may only be used for the purpose described in this manual. In particular, the given limits of the device must be observed. The safety of the installation in which the unit is integrated is the responsibility of the installer!

Non-observance of these instructions can lead to a reduction in the safety of this device!

Please keep this manual in a safe place.

This manual is intended exclusively for electricians or persons trained by an electrician who are familiar with the applicable national standards and safety rules. Installation, commissioning and operation of this device may only be carried out by qualified personnel.
2.3 Security during Installation

**WARNING!**

Preparing for Commissioning
This built-in unit, has been designed and examined according to the requirements of the standard IEC 60950-1 „Information Technology Equipment - Safety“.

When the built-in unit is used in a terminal (e.g., housing cabinet), additional requirements according to Standard IEC 60950-1 must be observed and complied with. In particular, the general requirements and the safety of electrical equipment (such as IEC, VDE, DIN, ANSI) as well as the applicable national standards are to be observed.

The device has been developed for use in the industrial sector as well as in residential areas and can only be used in such environments. For environments with higher levels of soiling, additional measures, e.g. Installation in an air-conditioned control cabinet required.

Transport, Unpacking, Installation
If the unit is brought into the operating room from a cold environment, condensation may occur, wait until the unit is temperature-controlled and absolutely dry before operating it.

When unpacking, setting up, and before operating the equipment, be sure to read the information on the hardware installation and the specifications of the equipment. These include, for example, dimensions, electrical characteristics, and necessary ambient and climatic conditions, etc.

The fire protection must be ensured in the installed state.

For mounting, the housing must not be damaged. No holes may be drilled in the housing.

For safety reasons, the device with the highest mass should be installed in the lowest position of the rack. Other devices must be placed from the bottom to the top.

The device must be protected against mechanical stress such as vibration or shock.
Connecting Data Cables

During a thunderstorm, data transmission lines must not be connected or disconnected (risk of lightning).

When wiring the devices, the cables must be connected or disconnected in the order of the arrangement described in the user documentation accompanying the device. Always attach all cables to the plug during connection and removal. Never pull the cable itself. Pulling the cable can cause the cables to disconnect from the plug.

Install the cables in way that they do not constitute a hazard (danger of tripping) and are not damaged, i.e. kinked.

Connecting Power Supply

This equipment is operated at a hazardous voltage. Non-observance of the safety instructions in this manual may result in serious personal injury or property damage.

Before connecting to the power supply, a grounding cable must be connected to the earth connection of the device.

Before operation, check that all cables and lines work properly and are undamaged. Pay particular attention to the facts that the cables do not have kinks or that they are not too short around corners, and no objects are placed on the cables. Also make sure that all connections are secure.

Faulty shielding or cabling will endanger your health (electrical shock) and may destroy other equipment.

Ensure that all necessary safety precautions have been taken. Make all connections to a unit before turning on the power. Observe the safety instructions on the device (see safety symbols).

The metal housing of the device is grounded. It must be ensured that enough air and creepage distances to neighboring voltage-carrying parts are provided during assembly in the control cabinet and no short circuits are caused.

In the case of malfunctions or servicing (e.g. in the event of a damaged housing or power cable or when fluids or foreign objects enter), the current flow can be interrupted. Questions about the house installation, need to be clarified with your house administration.

The power supply should be connected with a short, low-inductance line.
<table>
<thead>
<tr>
<th>AC Power Supply</th>
<th>DC Power Supply</th>
</tr>
</thead>
<tbody>
<tr>
<td>• The device is a device of protection class 1 and may only be connected to a grounded outlet (TN system).</td>
<td>• Outside the assembly group the device must be disconnectable from the power supply in accordance with the provisions of IEC 60950-1 (e.g. by the primary line protection).</td>
</tr>
<tr>
<td>• For safe operation, the device must be protected by an installation fuse of max. 16 A and equipped with a residual current circuit breaker in accordance with the applicable national standards.</td>
<td>• Installation and disassembly of the power supply plug is only permitted if the assembly group is switched off (e.g. by the primary line protection).</td>
</tr>
<tr>
<td>• The unit must always be disconnected from the mains and not from the appliance.</td>
<td>• The supply lines must be adequately secured and dimensioned.</td>
</tr>
<tr>
<td>• Devices with mains plugs are equipped with a safety-tested mains cable of the country of use and may only be connected to a grounded shockproof socket, otherwise electric shock may occur.</td>
<td></td>
</tr>
<tr>
<td>• Make sure that the mains socket on the appliance or the mains socket of the house installation is freely accessible to the user so that the mains cable can be pulled out of the socket in case of emergency.</td>
<td>• Connection Cross Section:</td>
</tr>
<tr>
<td></td>
<td>1 mm² – 2.5 mm²</td>
</tr>
<tr>
<td></td>
<td>17 AWG – 13 AWG</td>
</tr>
<tr>
<td></td>
<td>• The device must be supplied with a suitable disconnector (switch). The separation device must be easily accessible, placed near the device and marked as a separation device for the unit.</td>
</tr>
</tbody>
</table>
2.4 Protective Conductor- / Ground-Terminal

ATTENTION!

In order to ensure safe operation and to meet the requirements of IEC 62368-1, the device must be correctly connected to the protective earth conductor via the protective earth connection terminal.

If an external earth connection is provided on the housing, it must be connected to the equipotential bonding rail (grounding rail). The mounting parts (without cable) are not included in the scope of delivery.

Note:
Please use a grounding cable ≥ 1.5 mm²
Always pay attention to a correct crimp connection!

2.5 Fiber Optic

ATTENTION!
Laser Class 1
Risk of injury from laser!

The optical interface corresponds to laser class 1 according to IEC 60825-1 and contains a light-emitting diode (LED). A direct view into this beam should be avoided.

Unused connectors of optical interfaces should always be provided with the protective cap.
2.6 Safety during Operation

WARNING!

Avoiding Short-Circuits
Make sure not to get any objects or liquids inside the unit. Electric shock or short circuit could result.

Ventilation Slots
Make sure that the ventilation slots are not covered or dusty, as there is a danger of overheating during operation. Disturbances during operation can result.

Normal Operation
The normal operation and the observance of the EMC limits (electromagnetic compatibility) are only ensured if the housing cover is properly installed and when the doors are closed (cooling, fire protection, shielding against electrical, magnetic and electromagnetic fields).

Switch off in fault / service case
By switching off, the devices are not disconnected from the power supply. In the event of a fault or service case, the devices must be immediately disconnected from all power supplies.

Follow the steps below:
- Switch off the device
- Disconnect all power plugs
- Inform the service
- Devices that are connected via one or more uninterruptible power supplies (UPS) remain operational even when the UPS power cord is disconnected. Therefore, you must put the UPS out of operation according to the documentation of the corresponding user documentation.
2.7 Safety during Maintenance

**WARNING!**

When you are expanding the device, use only device parts that are approved for the system. Non-observance may result in injury to the EMC or safety standards and cause malfunction of the device.

If device parts, which are released for the system, are extended or removed there may be a risk of injury in the area of the hands, due to the pull-out forces (approx. 60 N).

The service informs you which device parts may be installed.

The device must not be opened, repairs to the device may only be carried out by the manufacturer or by authorized personnel. Improper repairs can result in considerable danger to the user (electric shock, fire hazard).

Unauthorized opening of the device or of individual parts of the device can also lead to considerable risks for the user and result in a loss of warranty as well as an exclusion of liability.

- Danger due to moving parts - keep away from moving parts.

- Device parts can become very hot during operation. Do not touch these surfaces! If necessary, switch off the unit before installing or removing any equipment, and allow it to cool down.

2.8 Cleaning and Care

**ATTENTION!**

Do not wet clean the appliance! Penetrating water can cause considerable dangers to the user (e.g., electric shock).

Liquid can destroy the electronics of the device! Liquid penetrates into the housing of the device and can cause a short circuit of the electronics.

Only clean with a soft, dry cloth. Never use solvents or cleaners.
2.9 Prevention of ESD Damage

ATTENTION!

The designation ESD (Electrostatic Sensitive Devices) refers to measures which are used to protect electrostatically endangered components from electrostatic discharge and thus to prevent destruction. Systems and assemblies with electrostatically endangered components usually have the following characteristics:

Indicator for assemblies with electrostatic endangered components

The following measures protect electrostatically endangered components from destruction:

Prepare removal and installation of assemblies
Unload yourself (for example, by touching a grounded object) before touching assemblies.

Ensure that you wear a grounding strap on the wrist when working with such assemblies, which you attach to an unpainted, non-conductive metal part of the system.

Use only tools and devices that are free from static electricity.

Transporting Assemblies
Assemblies may only be touched at the edge. Do not touch any pins or conductors on assemblies.

Installing and Removing Assemblies
Do not touch persons who are not grounded while removing or installing components. This could result in a loss of grounding protection from your electrostatic discharge.

Storing Assemblies
Always keep assemblies in ESD protective covers. These protective covers must be undamaged. ESD protective covers, which are extremely wrinkled or even have holes, no longer protect against electrostatic discharge.

ESD protective covers must not be low-resistance and metallically conductive if a lithium battery is installed on the assembly.
2.10 Return of Electrical and Electronic Equipment

ATTENTION!

WEEE Directive on Waste Electrical and Electronic Equipment 2012/19 / EU
(WEEE Waste Electrical and Electronic Equipment)

Separate Collection
Product Category: According to the device types listed in the WEEE Directive, Appendix 1, this product is classified as an IT and communication device.

This product meets the labeling requirements of the WEEE Directive. The product symbol on the left indicates that this electronic product must not be disposed of in domestic waste.

Return and Collection Systems
For returning your old equipment, please use the country-specific return and collection systems available to you or contact Meinberg.

The withdrawal may be refused in the case of waste equipment which presents a risk to human health or safety due to contamination during use.

Return of used Batteries
Batteries marked with one of the following symbols may not be disposed of together with the household waste according to the EU Directive.
3 ADU/FOS/MP Features

ADU is an antenna distribution unit for connecting a Meinberg GPS antenna/converter (GNSS|IF|15V DC) to several Meinberg GPS receivers (up to eight receivers) via single mode fiber lines. The ADU system must be mounted inside the building and connected to the Meinberg GPS converter antenna via a coaxial cable.

The GOAL-S-R module is connected on receiver side to the GPS antenna input of the receiver via a coaxial cable and can be mounted close to the connected receiver.

The two modules (ADU and GOAL-S-R) are interconnected via E9/125µm single-mode fiber. This type of antenna connection has the following advantages:

- long antenna cable runs possible (up to 10km)
- no danger caused by overvoltage damage via the antenna cable
- tap-proof security communication through fiber optic connection

The GOAL-S/R modules are installed at receiver side and powered by the Meinberg GPS-IF receiver via the coaxial cable. The ADU/FOS/MP, installed on the antenna side, requires an external power source for its own power supply for operation, as well as for powering the connected antenna. An unconnected antenna and a short circuit on the antenna line are indicated by a status LED.

The LEDs on the front panel indicate the operating status of the internal GPS receiver. If the internal receiver is ready for operation and the Meinberg GPS antenna is correctly installed, the LEDs "Ant., Nav and Init" must light green, the Fail-LED is off then.

The system is suitable for the subsequent extension of existing Meinberg GPS systems. The following GPS receivers are suitable for use with a GOAL-S Antenna Link:

- GPS180
- GPS180SV
- GPS180PEX
- GPS180AMC
- GPS180XHS
- GNS181-UC

and older receivers of the series GPS163, GPS164, GPS165, GPS167, GPS168, GPS169 and GPS170 (but not GPS166!).
4 Connection

The maximum possible length of the SMF fiber optic connection (C) is 10km. However, this distance can only be achieved by using a continuous connection with a fiber type of category OS2 (0.4dB/km) without additional attenuating plug connections and with the shortest possible copper cable connection to the antenna (A) and the receiver (B). In particular, the copper cable between the GOAL-S-R and the GPS receiver should not be longer than 50m.

![Connection Scheme GOAL-S](image_url)

*Figure: Connection Scheme GOAL-S*

The signal propagation time of the antenna cable can be compensated via the GPS receiver (see manual of the receiver). The received time frame is delayed by approx. 5ns per meter antenna cable. This information applies to the copper cable as well as to the fiber optic cable. By entering the total cable length, this time error is compensated. When using the GOAL system, an additional value of 20m must be added to compensate for the constant signal delay caused by the electronics of the GOAL-S.

The "Antenna Faulty" and "Antenna Short-Circuit" warnings, generated by the GPS receiver, will only work if there is interference on the copper cable between the GOAL-S-R and the GPS receiver. Disturbances on the optical fiber link or the copper cable to the antenna can only be detected by loss of the received satellites, the GPS receiver changes to the 'Warm Boot' operating mode.
5 Mounting the GPS Antenna

The GPS satellites are not stationary, but circle round the globe with a period of about 12 hours. They can only be received if no building is in the line-of-sight from the antenna to the satellite, so the antenna/downconverter unit must be installed in a location that has as clear a view of the sky as possible. The best reception is achieved when the antenna has a free view of 8° angular elevation above the horizon. If this is not possible, the antenna should be installed with the clearest free view to the equator, because the satellite orbits are located between latitudes 55° North and 55° South. If this is not possible, you may experience difficulty receiving the four satellites necessary to complete the receiver's position solution.

The antenna/converter unit can be mounted on a wall, or on a pole up to 60 mm in diameter. A 45 cm plastic tube, two wall-mount brackets, and clamps for pole mounting are included with every GPS180. A standard RG58 coaxial cable should be used to connect the antenna/downconverter unit to the receiver. The maximum length of cable between antenna and receiver depends on the attenuation factor of the coaxial cable.

High voltage protectors must be installed directly after reaching the indoors. The optional delivered protection kit is not for outdoor usage.

---

**WARNING!**

Antenna mounting without effective anti-fall protection

**Danger to life due to fall!**
- Pay attention to effective working safety when installing antennas!
- Never work without an effective anti-fall equipment!

**WARNING!**

Working on the antenna system during thunderstorms

**Danger to life due to electrical shock!**
- Do not carry out any work on the antenna system or the antenna cable if there is a risk of a lightning strike.
- Do not carry out any work on the antenna system if the safety distance to free lines and sequential circuits is exceeded.
5.1 Antenna Assembly with Surge Voltage Protection

Optional a surge voltage protector for coaxial lines is available. The shield has to be connected to earth as short as possible by using the included mounting bracket. Normally you connect the antenna converter directly with the antenna cable to the system.
6 ADU/FOS/MP - Technical Specifications

6.1 ADU/FOS/MP (Antenna Side)

Connectors:
- SC-APC connector (FO Link)
- N-Norm socket (Meinberg GPS-IF Receiver)
- Error relay output, change-over contact, 3pin DFK connector
- ground terminal connector on chassis

RS232 Interface
- for parameterization of the built-in GPS-SQ reference receiver, DSUB-9 male connector

Antenna Input:
- Antenna circuit galvanically isolated, dielectric strength 1000 V
- IF frequency from converter: 35.4MHz
- mixed frequency to the converter: 10MHz
- supply voltage to the converter: 15 V DC, max. 100 mA

FO Link:
- SC-APC connector for connecting an E9/125μm SMF
- Wavelength: 1550nm (transmit)
- coupling optical power: max. 100μW (-10dBm)
- typ. 50μW (-13dBm)
- optical input power: min 1μW (-30dBm)

Status LEDs:
- Antenna: green: antenna is connected
- red: not connected or short circuit
- FO Link: green: GOAL-S-R is connected
- red: no successful connection to the GOAL-S-R
- Laser ON: green: laser is in operation
- off: laser is off (antenna or FO-Link error)
- Power: green: power OK
- off: no power supply

Receiver: 12 - channel C/A code receiver with external antenna/converter unit

Antenna: Antenna/converter unit with remote power supply
- refer to chapter "Technical specifications of antenna"

Power Supply for Antenna:
- 15 V DC, continuous short circuit protection, automatic recovery
- Isolation voltage 1000 V DC, provided via antenna cable

Antenna Input:
- Antenna circuit dc-insulated; dielectric strength: 1000 V
- Length of cable: refer to chapter "Mounting the Antenna"

Time to Synchronization:
- one minute with known receiver position and valid almanac
- 12 minutes if invalid battery buffered memory

Data Format: Binary, byte serial

Serial Port: 1 x asynchronous serial port (RS-232)
- Baud Rate: 300 up to 19200
- Framing: 7N2, 7E1, 7E2, 8N1, 8N2, 8E1, 801
default setting:
COM0: 19200, 8N1
Meinberg Standard time string, per second

Power Supply: 100–240 V AC, (50/60Hz)
Power consumption: max. 20W

Chassis: 19" metal chassis, 1 U/84 HP (Multipack)

Protection Class: IP30

Phys. Dimension: 483 mm wide x 43 mm high x 285 mm deep

Ambient Temperature: 0 ... 50° C
Storage Temperature: -20 ... 70° C
Humidity: max 85%

Classification according to IEC 60825-1:
Laser class 1
the accessible laser radiation is safe under reasonably foreseeable conditions of operation.

ATTENTION!
Laser Class 1

The optical interface corresponds to laser class 1 according to IEC 60825-1 and contains a laser diode. A direct view into this beam should be avoided.

Unused connectors of optical interfaces should always be provided with the protective cap.
6.2 AC/DC Power Connector

Connection Type: 5pin DFK

Pin Assignment:
1: N/-
2: not connected
3: PE (Protective Earth)
4: not connected
5: L/+

**WARNING!**
This equipment is operated at a hazardous voltage.

Danger to life due to electrical shock!
- Only qualified personnel (electricians) may connect the device.
- Never work with open terminals and plugs while the power is on.
- All connectors must be protected against touching live parts with a suitable plug housing!
- **Note:** Always ensure safe wiring!
- **Important:** The device must be connected to a proper grounding (PE).
6.3 Error Relay

On the back panel of the device you can find a DFK connector labeled "Error". This relay output is connected to the TTL TIME_SYNC output of the reference clock (GPS, PZF, TCR, ...). If the internal reference clock has been synchronized by its source (GPS, DCF77 or IRIG) the relay will switch to mode "NO". In case of bad antenna signal or the device has been switched off the relay falls back to mode "NC".

Technical Specification

Switching Voltage max.: 125 V DC
140 V AC

Switching Current max.: 1A

Switching Load max.: DC 30 W
AC 60 VA

Switching Current UL/CSA: 0.46 A 140 V AC
0.46 A 65 V DC
1A 30 V DC

Response Time: ca. 2ms

WARNING!
This equipment is operated at a hazardous voltage.

Danger to life due to electrical shock!
- Never work with open terminals and plugs while the power is on!
- When working on the connectors of the error relay cable, always remove both sides of the cable from the respective devices!
- Dangerous voltages can occur at the terminal of the fault signal relay! Work on the terminal of the fault signal relay must never be carried out with the signal voltage present!
6.4 GOAL-S/R (receiver side)

**Connectors:**
- SC-APC connector (FO Link)
- N-Norm socket (Meinberg GPS-IF Receiver)
  - ground terminal via 6.3mm flat plug

**FO Link:**
- SC-APC connector for connecting an E9/125µm SMF
  - Wavelength: 1310nm (transmit), 1550nm (receive)
  - coupling optical power: max 1mW (0dBm)
    - typ. 500µW (-3dBm)
  - optical input power: min 1µW (-30dBm)

**Ambient Temperature:** 0 ... 50°C

**Humidity:** max 85%

**Chassis:** anodized aluminum housing
- with clamp for 35mm railmount

**Protection Class:** IP30

**Phys. Dimension:** 28mm x 69mm x 85mm (H x W x D)

**Classification according to IEC 60825-1:** Laser class 1
- the accessible laser radiation is safe under reasonably foreseeable conditions of operation.
6.5 Technical Specifications GPS Antenna

Antenna: dielectrical patch antenna, 25 x 25 mm
receive frequency: 1575.42 MHz

Bandwith: 9 MHz

Converter: local oscillator to
converter frequency: 10 MHz
first IF frequency: 35.4 MHz

Power Requirements: 15 V, @ 100mA
(provided via antenna cable)

Connector: N-Type, female

Ambient Temperature: -40 … +65°C

Housing: ABS plastic case for outdoor installation (IP66)
