2 Safety Hints

2.1 Important Safety Instructions and Protective Measures

The following safety instructions must be respected in all operating and installation phases of the device. Non-observance of safety instructions, or rather special warnings and operating instructions in product manuals, violates safety standards, manufacturer instructions and proper usage of the device. Meinberg Funkuhren shall not be responsible for any damage arising due to non-observance of these regulations.

Depending on your device or the installed options some information is not valid for your device.

If a procedure is marked with the following signal words, you may only continue, if you have understood and fulfilled all requirements. In this documentation dangers and indications are classified and illustrated as follows:

**DANGER!**
The signal word indicates an imminently hazardous situation with a high risk level. This notice draws attention to an operating procedure or similar proceedings, of which a non-observance may result in serious personal injury or death.

**WARNING!**
The signal word indicates a hazard with a medium risk gradient. This notice draws attention to an operating procedure, a procedure or the like which, if not followed, can lead to serious injuries, possibly resulting in death.

**CAUTION!**
The signal word indicates a hazard with a low risk gradient. This notice draws attention to an operating procedure, a procedure or the like which, if not followed, can lead to minor injuries.

**ATTENTION!**
This notice draws attention to an operating procedure, a procedure or the like which, if not followed, can cause damage to the product or loss of important data.
2.2 Used Symbols

The following symbols and pictograms are used in this manual. To illustrate the source of danger, pictograms are used, which can occur in all hazard classes.

<table>
<thead>

This product is handled as a B2B category product. In order to secure a WEEE compliant waste disposal it has to be returned to the manufacturer. |
The manuals for a product are included in the scope of delivery of the device on a USB stick. The manuals can also be obtained via the Internet. Enter www.meinbergglobal.com into your browser, then enter the corresponding device name in the search field at the top.

This manual contains important safety instructions for the installation and operation of the device. Please read this manual completely before using the unit.

This device may only be used for the purpose described in this manual. In particular, the given limits of the device must be observed. The safety of the installation in which the unit is integrated is the responsibility of the installer!

Non-observance of these instructions can lead to a reduction in the safety of this device!

Please keep this manual in a safe place.

This manual is intended exclusively for electricians or persons trained by an electrician who are familiar with the applicable national standards and safety rules. Installation, commissioning and operation of this device may only be carried out by qualified personnel.
2.3 Security during Installation

WARNING!

Preparing for Commissioning
This built-in unit, has been designed and examined according to the requirements of the standard IEC 60950-1 "Information Technology Equipment - Safety".

When the built-in unit is used in a terminal (e.g., housing cabinet), additional requirements according to Standard IEC 60950-1 must be observed and complied with. In particular, the general requirements and the safety of electrical equipment (such as IEC, VDE, DIN, ANSI) as well as the applicable national standards are to be observed.

The device has been developed for use in the industrial sector as well as in residential areas and can only be used in such environments. For environments with higher levels of soiling, additional measures, e.g. Installation in an air-conditioned control cabinet required.

Transport, Unpacking, Installation
If the unit is brought into the operating room from a cold environment, condensation may occur, wait until the unit is temperature-controlled and absolutely dry before operating it.

When unpacking, setting up, and before operating the equipment, be sure to read the information on the hardware installation and the specifications of the equipment. These include, for example, dimensions, electrical characteristics, and necessary ambient and climatic conditions, etc.

The fire protection must be ensured in the installed state.

For mounting, the housing must not be damaged. No holes may be drilled in the housing.

For safety reasons, the device with the highest mass should be installed in the lowest position of the rack. Other devices must be placed from the bottom to the top.

The device must be protected against mechanical stress such as vibration or shock.
Connecting Data Cables
During a thunderstorm, data transmission lines must not be connected or disconnected (risk of lightning).

When wiring the devices, the cables must be connected or disconnected in the order of the arrangement described in the user documentation accompanying the device. Always attach all cables to the plug during connection and removal. Never pull the cable itself. Pulling the cable can cause the cables to disconnect from the plug.

Install the cables in way that they do not constitute a hazard (danger of tripping) and are not damaged, i.e. kinked.

Connecting Power Supply
This equipment is operated at a hazardous voltage. Non-observance of the safety instructions in this manual may result in serious personal injury or property damage.

Before connecting to the power supply, a grounding cable must be connected to the earth connection of the device.

Before operation, check that all cables and lines work properly and are undamaged. Pay particular attention to the facts that the cables do not have kinks or that they are not too short around corners, and no objects are placed on the cables. Also make sure that all connections are secure.

Faulty shielding or cabling will endanger your health (electrical shock) and may destroy other equipment.

Ensure that all necessary safety precautions have been taken. Make all connections to a unit before turning on the power. Observe the safety instructions on the device (see safety symbols).

The metal housing of the device is grounded. It must be ensured that enough air and creepage distances to neighboring voltage-carrying parts are provided during assembly in the control cabinet and no short circuits are caused.

In the case of malfunctions or servicing (e.g. in the event of a damaged housing or power cable or when fluids or foreign objects enter), the current flow can be interrupted. Questions about the house installation, need to be clarified with your house administration.

The power supply should be connected with a short, low-inductance line.
<table>

2.4 Fuse Replacement

**WARNING!**
This equipment is operated at a hazardous voltage.
Danger to life due to electrical shock!

- Disconnect the device from the mains! To do this, press the disconnector (switch). Then, loosen the locking screws of the supply plug (if present) and pull it off.
- Disconnect all signal lines such as, antenna, fault message relay contact and serial interfaces from the device.
- Replace the fuse.
- Reconnect all cables in reverse order. If necessary, turn on the power again.

Example of fuse marking: *T 2.5 A H 250 V*

- Trigger Characteristic: T (slow)
- Nominal Current A: 2.5 Ampere
- Switching Capacity: H (high)
- max. Voltage: 250 V

2.5 Protective Conductor- / Ground-Terminal

**ATTENTION!**

In order to ensure safe operation and to meet the requirements of IEC 62368-1, the device must be correctly connected to the protective earth conductor via the protective earth connection terminal.

If an external earth connection is provided on the housing, it must be connected to the equipotential bonding rail (grounding rail). The mounting parts (without cable) are not included in the scope of delivery.

**Note:**
Please use a grounding cable $\geq 1.5 \text{ mm}^2$
Always pay attention to a correct crimp connection!

2.6 Safety during Operation

**WARNING!**

Avoiding Short-Circuits
Make sure not to get any objects or liquids inside the unit. Electric shock or short circuit could result.

Ventilation Slots
Make sure that the ventilation slots are not covered or dusty, as there is a danger of overheating during operation. Disturbances during operation can result.

Normal Operation
The normal operation and the observance of the EMC limits (electromagnetic compatibility) are only ensured if the housing cover is properly installed and when the doors are closed (cooling, fire protection, shielding against electrical, magnetic and electromagnetic fields).

Switch off in fault / service case
By switching off, the devices are not disconnected from the power supply. In the event of a fault or service case, the devices must be immediately disconnected from all power supplies.

**Follow the steps below:**
- Switch off the device
- Disconnect all power plugs
- Inform the service
- Devices that are connected via one or more uninterruptible power supplies (UPS) remain operational even when the UPS power cord is disconnected. Therefore, you must put the UPS out of operation according to the documentation of the corresponding user documentation.
2.7 Safety during Maintenance

![WARNING!]

When you are expanding the device, use only device parts that are approved for the system. Non-observance may result in injury to the EMC or safety standards and cause malfunction of the device.

If device parts, which are released for the system, are extended or removed there may be a risk of injury in the area of the hands, due to the pull-out forces (approx. 60 N).

The service informs you which device parts may be installed.

The device must not be opened, repairs to the device may only be carried out by the manufacturer or by authorized personnel. Improper repairs can result in considerable danger to the user (electric shock, fire hazard).

Unauthorized opening of the device or of individual parts of the device can also lead to considerable risks for the user and result in a loss of warranty as well as an exclusion of liability.

- Danger due to moving parts – keep away from moving parts.

- Device parts can become very hot during operation. Do not touch these surfaces! If necessary, switch off the unit before installing or removing any equipment, and allow it to cool down.

2.8 Handling Batteries

![CAUTION!]

The lithium battery on the receiver modules has a service life of at least 10 years. If an exchange is necessary, the following notes must be observed:

The device is equipped with a lithium battery. The battery must not be short-circuited or recharged. Replacement of the lithium battery may only be carried out by the manufacturer or authorized personnel.

Risk of explosion if the battery is not replaced correctly. Replace only with the same or equivalent type recommended by the manufacturer.

When disposing used batteries, observe the local regulations for the disposal of hazardous waste.
2.9 Antenna Mounting

**WARNING!**
No antenna mounting without effective fall protection.

**Risk of death by falling!**
- Make sure you that have an effective occupational safety during antenna installation!
- Never work without effective fall protection!

**WARNING!**
Working on the antenna system during thunderstorms.

**Danger to life due to electric shock!**
- Do not carry out any work on the antenna system or the antenna cable if there is a risk of lightning strikes.
- Do not carry out any work on the antenna system if the safety distance to overhead lines is not guaranteed.

2.10 Cleaning and Care

**ATTENTION!**
Do not wet clean the appliance! Penetrating water can cause considerable dangers to the user (e.g., electric shock).

Liquid can destroy the electronics of the device! Liquid penetrates into the housing of the device and can cause a short circuit of the electronics.

Only clean with a soft, dry cloth. Never use solvents or cleaners.
2.11 Prevention of ESD Damage

ATTENTION!

The designation ESD (Electrostatic Sensitive Devices) refers to measures which are used to protect electrostatically endangered components from electrostatic discharge and thus to prevent destruction. Systems and assemblies with electrostatically endangered components usually have the following characteristics:

Indicator for assemblies with electrostatic endangered components
The following measures protect electrostatically endangered components from destruction:

Prepare removal and installation of assemblies
Unload yourself (for example, by touching a grounded object) before touching assemblies.

Ensure that you wear a grounding strap on the wrist when working with such assemblies, which you attach to an unpainted, non-conductive metal part of the system.

Use only tools and devices that are free from static electricity.

Transporting Assemblies
Assemblies may only be touched at the edge. Do not touch any pins or conductors on assemblies.

Installing and Removing Assemblies
Do not touch persons who are not grounded while removing or installing components. This could result in a loss of grounding protection from your electrostatic discharge.

Storing Assemblies
Always keep assemblies in ESD protective covers. These protective covers must be undamaged. ESD protective covers, which are extremely wrinkled or even have holes, no longer protect against electrostatic discharge.

ESD protective covers must not be low-resistance and metallically conductive if a lithium battery is installed on the assembly.
2.12 Return of Electrical and Electronic Equipment

ATTENTION!

WEEE Directive on Waste Electrical and Electronic Equipment 2012/19 / EU
(WEEE Waste Electrical and Electronic Equipment)

Separate Collection
Product Category: According to the device types listed in the WEEE Directive, Appendix 1, this product is classified as an IT and communication device.

This product meets the labeling requirements of the WEEE Directive. The product symbol on the left indicates that this electronic product must not be disposed of in domestic waste.

Return and Collection Systems
For returning your old equipment, please use the country-specific return and collection systems available to you or contact Meinberg.

The withdrawal may be refused in the case of waste equipment which presents a risk to human health or safety due to contamination during use.

Return of used Batteries
Batteries marked with one of the following symbols may not be disposed of together with the household waste according to the EU Directive.
3 Content of the USB stick

Besides this manual, the provided USB stick includes a setup program for the monitor software mbgdevman (Meinberg Device Manager). This utility can be used to configure Meinberg receivers via their serial ports and to display status information of the module.

The software is executable under the following operating systems:

- Windows 10
- Windows 8.1
- Windows 8
- Windows 7
- Ubuntu
- Mint Linux
- Debian
- SUSE Linux
- CentOS

If the USB stick is lost, the installation program can be downloaded free of charge from the Internet at: https://www.meinberg.de/german/sw/mbg-devman.htm

A detailed documentation in PDF format can be found here:
4 General information about GNS165

The Meinberg satellite receiver clock of the GNS165 series is available with several options. This manual describes the following models:

<table>
<thead>
<tr>
<th>Model</th>
<th>Power Supply</th>
<th>DC-Isolation Type</th>
<th>Programmable Pulse Outputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>GNS165DHS</td>
<td>20-60 V DC</td>
<td>PhotoMos relay</td>
<td>x</td>
</tr>
<tr>
<td>GNS165DAHS</td>
<td>100-240 V AC</td>
<td>Optocoupler</td>
<td>x x</td>
</tr>
<tr>
<td>GNS165/AQ/DHS</td>
<td>100-240 V DC</td>
<td></td>
<td>x</td>
</tr>
<tr>
<td>GNS165/AQ/DAHS</td>
<td></td>
<td></td>
<td>x x</td>
</tr>
</tbody>
</table>

The variants differ in power supply and the type of DC-isolation of the programmable pulse outputs. The differences are described in the relevant chapters, the name GNS165 is used whenever common features of all types of clocks are specified.

The satellite receiver clock GNS165 has been designed to provide an extremely precise time reference for the generation of programmable pulses. High precision available 24 hours a day around the whole world is the main feature of the new system which receives its information from the satellites of the Global Positioning System.

The satellites of most Global Navigation Satellite Systems (GNSS) like GPS, GLONASS, and Galileo are not stationary but circle round the globe in periods of several hours. Only few GNSS systems like the Chinese Beidou system work with stationary satellites. Such systems can only be received in certain regions of the Earth.

GNSS receivers need to track at least four satellites to determine their own position in space (x, y, z) as well as their time offset from the GNSS system time (t). Only if the receiver can determine its own position accurately the propagation delay of the satellite signals can also be compensated accurately, which is requirement to yield an accurate time. If the receiver position can only be determined less accurately then the accuracy of the derived time is also degraded.
GNSS satellite signals can only be received directly if no building is in the line-of-sight from the antenna to the satellite. The signals can eventually be reflected at buildings, etc., and the reflected signals can then be received. However, in this case the true signal propagation path is longer than expected, which causes a small error in the computed position, which in turn yields less accurate time.

Since most of the satellites are not stationary, the antenna has to be installed in a location with as much clear view of the sky as possible (e.g. on a rooftop) to allow for continuous, reliable reception and operation. Best reception is achieved when the antenna has a free view of 8° angular elevation above the horizon. If this is not possible then the antenna should be installed with the best free view to the sky in direction of the equator. Since the satellite orbits are located between latitudes 55° North and 55° South, this allows for the best possible reception.

All the satellites are monitored by control stations which determine the exact orbit parameters as well as the clock offset of the satellites’ on-board atomic clocks. These parameters are uploaded to the satellites and become part of a navigation message which is retransmitted by the satellites in order to pass that information to the user’s receiver.

The high precision orbit parameters of a satellite are called ephemeris parameters whereas a reduced precision subset of the ephemeris parameters is called a satellite’s almanac. While ephemeris parameters must be evaluated to compute the receiver’s position and clock offset, almanac parameters are used to check which satellites are in view from a given receiver position at a given time. Each satellite transmits its own set of ephemeris parameters and almanac parameters of all existing satellites.
5 GNS165 Features

The GNS165 is designed for mounting on a DIN rail. The front panel integrates eight LED indicators, a terminal block, two DSUB, two BNC-connectors and one SMA connector. The receiver is linked to the Multi-GNSS Antenna by a coaxial cable with length up to 70 m (when using Belden H155 low loss cable). It is possible to connect up to four receivers to one antenna by using an optional antenna diplexer. Additional outputs are described below.

The navigation message coming from the satellites is decoded by GNS165’s microprocessor in order to track the GNSS system time with an accuracy of better than $\pm 100\text{nsec}$. Compensation of the RF signal’s propagation delay is done by automatical determination of the receiver’s position on the globe. A correction value computed from the satellites’ navigation messages increases the accuracy of the board’s TCXO to $\pm 5 \times 10^{-9}$ and automatically compensates the oscillators aging. The last recent value is restored from the battery memory at power-up.

5.1 Time Zone and Daylight Saving

GPS system time differs from the universal time scale UTC (Universal Time Coordinated) by the number of leap seconds which have been inserted into the UTC time scale after GPS has been initiated in 1980. The current number of leap seconds is part of the navigation message supplied by the satellites, so GPS170SV’s internal real time is based on UTC.

Conversion to local time including handling of daylight saving year by year can be done by the receiver’s microprocessor. As standard the switchover times are set to the values of the European Union (Central Europe). The Manual describes how parameter setting for other locations is done. It is possible to deactivate the automatic switching to/from daylight saving.
5.2 Pulse outputs

The pulse generator of the satellite controlled clock GNS165 contains three independent channels and is able to generate a multitude of different pulses, which are configured with the software mbgdevman. The active state of each channel is invertible, the pulse duration settable between 10 msec and 10 sec in steps of 10 msec. In the default mode of operation the pulse outputs are disabled until the the receiver has synchronized after power-up. However, you can configure the assembly group to enable the ports immediately after switching on. The pulse outputs are electrically insulated by optocouplers or PhotoMOS relays and are available at the -X1- Interface (DMC-Connector).

The following modes can be configured for each channel independently:

**Timer mode:** Three on- and off-times per day per channel programmable

**Cyclic mode:** Generation of periodically repeated pulses.
A cycle time of two seconds would generate a pulse at 0:00:00, 0:00:02, 0:00:04 etc.

**DCF77-Simulation mode:** The corresponding output simulates the DCF77 time telegram.
The time marks are representing the local time as configured by the user.

**Single Shot Mode:** A single pulse of programmable length is generated once a day at a programmable point of time

**Per Sec. Per Min. Per Hr. modes:** Pulses each second, minute or hour

**Status:**
One of three status messages can be emitted:
- 'position OK': The output is switched on if the receiver was able to compute its position
- 'time sync': The output is switched on if the internal timing is synchronous to the GNS165-system
- 'all sync': Logical AND of the above status messages.
The output is active if position is calculated AND the timing is synchronized

**Time code**
The un-modulated IRIG or AFNOR signal of the built in time code generator is made available at the respective output.

**Idle-mode:** The output is inactive.

**Synthesizer:** Frequency output 0 Hz to 10 MHz

5.3 Asynchronous Serial Ports

One RS-485 serial interface and two asynchronous serial interface (RS-232) are available to the user. In the default mode of operation, the serial outputs are disabled until the receiver has synchronized after power-up. However, the system can be configured to enable those outputs immediately after power-up. Transmission speeds, framings and the kind of the time string can be configured separately. The serial ports are sending a time string either once per second, once per minute or on request with ASCII '?' only. The format of the output strings is ASCII, see the technical specifications for details. The corresponding parameters can be set up by mbgdevman (included Windows software) using serial port COM0.
5.4 Time code outputs

5.4.1 Introduction

The transmission of coded timing signals began to take on widespread importance in the early 1950’s. Especially the US missile and space programs were the forces behind the development of these time codes, which were used for the correlation of data. The definition of time code formats was completely arbitrary and left to the individual ideas of each design engineer. Hundreds of different time codes were formed, some of which were standardized by the “Inter Range Instrumentation Group” (IRIG) in the early 60’s. Detailed information about IRIG and other time codes can be found on http://www.meinberg.de/english/info/irig.htm

Except these time codes other formats, like NASA36, XR3 or 2137, are still in use. The module however generates IRIG-B or AFNOR NFS500 only.

Selection of the generated time code is done by using the monitor program.

5.4.2 Generated Time Codes

Besides the amplitude modulated sine wave signal, the board also provides unmodulated DC-Level Shift TTL output in parallel. Thus six time codes are available.

a) B002: 100 pps, DCLS signal, no carrier
   BCD time-of-year

b) B122: 100 pps, AM sine wave signal, 1 kHz carrier frequency
   BCD time-of-year

c) B003: 100 pps, DCLS signal, no carrier
   BCD time-of-year, SBS time-of-day

d) B123: 100 pps, AM sine wave signal, 1 kHz carrier frequency
   BCD time-of-year, SBS time-of-day

e) B006: 100 pps, DCLS Signal, no carrier
   BCD time-of-year, Year

f) B126: 100 pps, AM sine wave signal, 1 kHz carrier frequency
   BCD time-of-year, Year

g) B007: 100 pps, DCLS Signal, no carrier
   BCD time-of-year, Year, SBS time-of-day

h) B127: 100 pps, AM sine wave signal, 1 kHz carrier frequency
   BCD time-of-year, Year, SBS time-of-day

i) AFNOR: Code according to NFS-87500, 100 pps, wave signal,
   1kHz carrier frequency, BCD time-of-year, complete date,
   SBS time-of-day, Signal level according to NFS-87500

j) IEEE1344: Code according to IEEE1344-1995, 100 pps, AM sine wave signal,
   1kHz carrier frequency, BCD time-of-year, SBS time-of-day,
   IEEE1344 extensions for date, timezone, daylight saving and
   leap second in control functions (CF) segment.
   (also see table ‘Assignment of CF segment in IEEE1344 mode’)

k) C37.118 Like IEEE1344 - with turned sign bit for UTC-Offset
5.4.3 Time Code Generation

In the default mode of operation the IRIG/AFNOR timecode outputs are disabled until the GNS-receiver has been synchronized after power-up. Due to that the generation of the IRIG-code only starts after synchronization.

If the code must be available immediately after power-up, the software mbgdevman can be used to enable the time code output without synchronization of the GNS-receiver by setting the enable flag 'pulses' to 'always'. In this mode of operation the IRIG-code is not locked to UTC-second until synchronization.
5.4.4 IRIG Standard Format
5.4.5 AFNOR Standard Format
### 5.4.6 Assignment of CF Segment in IEEE1344 Code

1) current firmware does not support leap deletion of leap seconds
2) TFOM is cleared, when clock is synchronized first after power up, see chapter Selection of generated timecode
5.5 DCF77 Emulation

The clock generates TTL level time marks (active HIGH) which are compatible with the time marks spread by the German long wave transmitter DCF77. This long wave transmitter installed in Mainflingen near Frankfurt/Germany transmits the reference time of the Federal Republic of Germany: time of day, date of month and day of week in BCD coded second pulses. Once every minute the complete time information is transmitted. However, the generates time marks representing its local time as configured by the user, including announcement of changes in daylight saving and announcement of leap seconds. The coding scheme is given below:

<table>
<thead>
<tr>
<th>M</th>
<th>Start of Minute (0.1 s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>R</td>
<td>RF Transmission via secondary antenna</td>
</tr>
<tr>
<td>A1</td>
<td>Announcement of a change in daylight saving</td>
</tr>
<tr>
<td>Z1, Z2</td>
<td>Time zone identification</td>
</tr>
<tr>
<td>Z1, Z2 = 0, 1: Daylight saving disabled</td>
<td></td>
</tr>
<tr>
<td>Z1, Z2 = 1, 0: Daylight saving enabled</td>
<td></td>
</tr>
<tr>
<td>A2</td>
<td>Announcement of a leap second</td>
</tr>
<tr>
<td>S</td>
<td>Start of time code information</td>
</tr>
<tr>
<td>P1, P2, P3</td>
<td>Even parity bits</td>
</tr>
</tbody>
</table>

Time marks start at the beginning of new second. If a binary "0" is to be transmitted, the length of the corresponding time mark is 100 msec, if a binary "1" is transmitted, the time mark has a length of 200 msec. The information on the current date and time as well as some parity and status bits can be decoded from the time marks of the 15th up to the 58th second every minute. The absence of any time mark at the 59th second of a minute signals that a new minute will begin with the next time mark. The DCF emulation output is enabled immediately after power-up. The time stamps can be provided via pulses outputs. Furthermore, the DCF77 signal is available via a BNC connector as an amplitude-modulated 77.5 kHz carrier. This output can be used for radio clocks as a replacement for a DCF77 antenna.
6 Installation

6.1 Technical data GNS165 Chassis

The variants of the module GNS165 are designed for following housing dimensions of DIN-railmount:

| Housing:     | GPS165DHS: 85 mm x 105 mm x 104 mm | (B x H x T) |
|             | GPS165DAHS: 125.5 mm x 105 mm x 104 mm | (B x H x T) |
| Ambient Temperature: | 0...50 °C          |
| Storage Temperature:  | -20...70 °C        |
| Humidity:     | 85 %               |
| Protecting Rate: | IP20               |

6.2 Power supply

The variants of the module GNS165 are designed for following power supply options:

| GNS165DHS: | 20-60 V DC (DC-insulation 1.5 kV DC) |
| GNS165DAHS: | 100-240 V DC, 100-240 V AC, 50-60 Hz |

The voltage feed of the DC variants is done via terminal blocks in the frontpanel of the clock and should have low resistance to minimize spurious emission (EMI).

To avoid potential differences between the signal ground of GNS165 and a post-connected unit installed on different DIN rails, the signal ground of the clock is insulated from the case.

The case must be grounded by using the rear contact.
6.3 40dB Multi GNSS L1 Timing Antenna with Integrated Lightning Protection

The GPS, GLONASS, Galileo and BeiDou satellites are not stationary but circle round the globe in a period of about 12 hours. They can only be received if no building is in the line-of-sight from the antenna to the satellite, so the antenna unit must be installed in a location with a free view to the sky. The best reception is given when the antenna has a free view of 8° angular elevation above horizon. If this is not possible the antenna should be installed with a mostly free view to the equator because of the satellite courses which are located between latitudes of 55° North and 55° South. If even this is not possible problems occur especially when at least four satellites for positioning have to be found.

The active L1 timing reference antenna is specifically designed for long-lasting, trouble-free deployments for a variety of applications. The low noise, high gain amplifier is well suited to address attenuation issues. The proprietary quadrifiliar helix design, coupled with multistage filtering provides superior out-of-band rejection and lower elevation pattern performance than traditional patch antennas.

- Their unique radome shape sheds water and ice, while eliminating problems associated with bird perching.
- This antenna is made of materials that fully comply with provisions stipulated by EU directives RoHS 2002/95/EC.
- The antenna provides integrated lightning protection capability.
- The antenna also features ESD, reverse polarity protection and transit voltage suppression.

A standard coaxial cable with 50 ohm impedance should be used to connect the antenna to the receiver. The max. length of cable between antenna and receiver is 50 meters (H155 - Low-Loss).

See data sheet "40 dB Multi GNSS Timing Antenna with Integrated Lightning Protection" (pctel_gpsl1gl.pdf) or download this document:

Active Multi GNSS Antenna
http://www.meinbergglobal.com/download/docs/other/pctel_gpsl1gl.pdf

6.3.1 GNSS Antenna for Stationary Installation

The Multi GNSS Antenna is an active GNSS antenna which can receive the signals of the GPS, GLONASS, Galileo and Beidou satellite systems. It is very well suited for stationary installations, operates with a 5V DC supply voltage provided by the receiver, and has an integrated surge protection.

The antenna cable length can be up to 70 meters if a H155 low-loss coaxial cable is used.

**WARNING!**
Antenna mounting without effective anti-fall protection

**Danger to life due to fall!**
- Pay attention to effective working safety when installing antennas!
- *Never* work without an effective anti-fall equipment!

**WARNING!**
Working on the antenna system during thunderstorms

**Danger to life due to electrical shock!**
- Do *not* carry out any work on the antenna system or the antenna cable if there is a risk of a lightning strike.
- Do *not* carry out any work on the antenna system if the safety distance to free lines and sequential circuits is exceeded.

*Figure: Schematic diagram of mounting the Multi GNSS Antenna*
6.3.2 GNSS Antenna for Mobile Applications

The RV-76G is an active GNSS antenna which can receive the signals of the GPS, GLONASS, and Galileo satellite systems. It operates with a 5V DC supply voltage provided by the receiver, and should be preferred for mobile applications. However, the maximum length of the antenna cable is limited depending on the cable type, e.g. 5 meters with RG174/U cable, so this antenna is less suitable for stationary installations.

![Installation drawing RV-76G antenna](image)

**Figure: Installation drawing RV-76G antenna**

**WARNING!**
Antenna mounting without effective anti-fall protection

danger to life due to fall!
- Pay attention to effective working safety when installing antennas!
- Never work without an effective anti-fall equipment!

**WARNING!**
Working on the antenna system during thunderstorms

danger to life due to electrical shock!
- Do not carry out any work on the antenna system or the antenna cable if there is a risk of a lightning strike.
- Do not carry out any work on the antenna system if the safety distance to free lines and sequential circuits is exceeded.
6.4 Powering Up the System

If both the antenna and the power supply have been connected the system is ready to operate. About 10 seconds to 3 minutes after power-up the receiver has warmed up and operates with the required accuracy. If the receiver finds valid almanac and ephemeris data in its battery buffered memory and the receiver’s position has not changed significantly since its last operation the receiver can find out which satellites are in view now. Only a single satellite needs to be received to synchronize and generate output pulses, so synchronization can be achieved maximally one to 10 minutes after power-up. After 20 minutes of operation the OCXO is full adjusted and the generated frequencies are within the specified tolerances.

If the receiver position has changed by some hundred kilometers since last operation, the satellites’ real elevation and doppler might not match those values expected by the receiver thus forcing the receiver to start scanning for satellites. This mode is called Warm Boot because the receiver can obtain ID numbers of existing satellites from the valid almanac. When the receiver has found four satellites in view it can update its new position and switch to Normal Operation. If the almanac has been lost because the battery had been disconnected the receiver has to scan for a satellite and read in the current almanacs. This mode is called Cold Boot. It takes 12 minutes until the new almanac is complete and the system switches to Warm Boot mode scanning for other satellites.

In the default mode of operation, neither pulse and synthesizer outputs nor the serial ports will be enabled after power-up until synchronization has been achieved. However, it is possible to configure some or all of those outputs to be enabled immediately after power-up. If the system starts up in a new environment (e. g. receiver position has changed or new power supply) it can take some minutes until the OCXO’s output frequency has been adjusted. Up to that time accuracy of frequency drops to $10^{-8}$ reducing the accuracy of pulses to $±3\,\mu$s.
6.5 Meinberg Device Manager

The program serves the configuration of Meinberg Radio Clocks. The software can be run on the operating systems Windows 7 or higher.

Documentation:

Download:

A connection between the system and the program can be produced by serial port. The configurations are described in the mbgdevman-documentation.
Connection

The PC should have generated an automatic connection to the clock, select the tab "Search Device" (Nr.10). Alternatively, you can use the button "Add Device" (Nr.1) to generate a connection to the clock by using the same configure (Port / Baud / Framing).

Configuration

With Number 4 (Configure Device) various configurations can be carried out on the system. Please note that any changes you make in the settings must always be confirmed with the "Apply Configuration" button. Use the "Restore Configuration" button to reset all settings back to their default values. For more information, please refer to the Meinberg Device Manager manual.

7.2 Status LEDs

**LED Indicators**

- **TC:** green: if time code RS422 is available
- **PP 1 - PP 3:** green: if a programmable pulse is available
- **Init:** blue: while the receiver passes through the initialization phase
  - green: the oscillator has warmed up
- **Fail:** red: time has not synchronized
- **Ant:** red: antenna faulty or not connected
- **Nav:** green: positioning successfully
### 7.3 Assignment of the terminal block

The pulse outputs are accessible through the terminal block in the front panel. In addition, the power supply of variants GNS165DHS and GNS165/AQ/DHS is connected using two poles of this terminal block. The marking besides the terminal has the following meaning:

- **PP 1**
- **PP 2**
- **PP 3**
- **+ RS-485**
- **+ TC_422**
- **TC_TTL**
- **TC_FET**

**DC in**: 20-60 V

- **X1 (DAHS)**
- **DC in**

- **+ DC in**: Positive potential of power supply (GNS165(/AQ/)/DHS only)
- **– DC in**: Reference potential of power supply (nur GNS165(/AQ)/DHS)

- **+ PP x**: Programmable Pulse (positiv)
- **– PP x**: Programmable Pulse (negativ)

- **+ RS-485**: Serial Time string (positiv)
- **– RS-485**: Serial Time string (negativ)

- **+ TC_422**: Time Code (DCLS) with RS-422 level (positiv)
- **– TC_422**: Time Code (DCLS) with RS-422 level (negativ)

- **TC_TTL**: Time Code (DCLS), TTL into 50 Ω
- **TC_FET**: Time Code (DCLS), field-effect transistor (470 Ω to +5V)

- **GND**: Ground
7.4 Assignment of the DSUB connectors

The serial ports COM0 and COM1 are accessible via nine-pole DSUB connectors in the frontpanel. These RS-232 interfaces can be connected to a computer by using a standard modem cable. TxD describes the sending, RxD the receiving line of the GNS165.

**Connector:** D-SUB female 9pin

**Cable:** shielded data line

**Assignment:**
- Pin 2: TxD (transmit)
- Pin 3: RxD (receive)
- Pin 5: GND (ground)

---

7.5 GNSS Antenna

**Cable:** shielded coaxial line

**Cable length:** max. 70m with Belden H155 coax cable

**Connector:** SMA female

**Type of receiver**
- **GNS/GPS:** Number of channels: 72
- **Galileo/BeiDou**

**Type of antenna:** 40 dB Multi GNSS L1
Antenna with Integrated Lightning Protection

- Frequency band: L1
- Antenna Gain: $\geq 35$ dBi / $\geq 3$ dBi
- Nominal Impedance: 50 ohms

---

**WARNING!**
Working on the antenna system during thunderstorms

**Danger to life due to electrical shock!**
- Do not carry out any work on the antenna system or the antenna cable if there is a risk of a lightning strike.
- Do not carry out any work on the antenna system if the safety distance to free lines and sequential circuits is exceeded.
7.6 DCF77 Simulated Output

- **Level:** 77.5kHz
- **Connector:** BNC, female
- **Cable:** shielded coax line

7.7 Time Code AM Output

- **Carrier frequency:** 1 kHz (IRIG-B)
- **Signal outputs:**
  - Unbalanced sine wave-signal:
    - 3 V_{pp} (MARK)
    - 1 V_{pp} (SPACE) into 50 Ohm
- **Connector:** BNC, female
- **Cable:** shielded coax line
7.8 Power Supply Connector

Connection Type: 5pin DFK

Pinbelegung:
1: N/-
2: not connected
3: PE (Protective Earth)
4: not connected
5: L/+ 

Input Parameter

Nominal Voltage Range: \( U_N = 100-240 \, \text{V} \sim \)
\( = 100-240 \, \text{V} \)

Max. Voltage Range: \( U_{\text{max}} = 85-264 \, \text{V} \sim \)
\( = 90-264 \, \text{V} \)

Nominal Current: \( I_N = 0.15 \, \text{A} \)

Nominal Frequency Range: \( f_N = 50-60 \, \text{Hz} \)

Max. Frequency Range: \( f_{\text{max}} = 47-63 \, \text{Hz} \)

Inrush Current: \( I_P = 50 \, \text{A} @ 230 \, \text{V AC} \)

Output Parameter

Max. Power: \( P_{\text{max}} = 15 \, \text{W} \)

Max. Heat Emission: \( E_{\text{therm}} = 54.00 \, \text{kJ/h (51.19 BTU/h)} \)

WARNING!
This equipment is operated at a hazardous voltage.

Danger to life due to electrical shock!

- Only qualified personnel (electricians) may connect the device.
- Never work with open terminals and plugs while the power is on.
- All connectors must be protected against touching live parts with a suitable plug housing!

- Note: Always ensure safe wiring!

- Important: The device must be connected to a proper grounding (PE).
8 Technical Specifications GNS165 receiver

Receiver: Combined GPS / GLONASS / Galileo / BeiDou receiver
- Number of channels: 72
- Frequency band: GNSS L1
  - 1575.42 ± 10 MHz / 1602-1615 MHz

Antenna: Type of antenna: Multi – GNSS L1 Antenna
- Antenna with Integrated Lightning Protection
  (see chapter "Mounting the antenna")

Time to Synchronization: one minute with known receiver position and valid almanac
- 12 minutes if invalid battery buffered memory

Battery Backup: storage of pulse configuration and important GNSSS-system data
- in the internal RAM, backed-up by lithium battery
- lifetime of battery 10 years min.

Pulse Outputs: three programmable outputs

GNS165/DHS, GNS165/DAHS
- DC-insulated by optocouplers
- $U_{CE_{\text{max}}} = 55 \text{ V}$, $I_{C_{\text{max}}} = 50 \text{ mA}$, $P_{\text{tot}} = 150 \text{ mW}$, $V_{\text{iso}} = 5000 \text{ V}$
- pulse delay: $t_{\text{on}}$ e.g. 20 $\mu$sec ($I_C = 10 \text{ mA}$)
- $t_{\text{off}}$ e.g. 3 $\mu$sec ($I_C = 10 \text{ mA}$)

GNS165/AQ/DHS, GNS165/AQ/DAHS
- DC-insulated by PhotoMOS relays
- $U_{\text{max}} = 150 \text{ V AC/DC}$ peak, $I_{\text{max}} = 150 \text{ mA}$, $P_{\text{tot}} = 360 \text{ mW}$, $V_{\text{iso}} = 1500 \text{ V}$
- pulse delay: $t_{\text{on}}$ e.g. 0.18 msec ($I_{\text{load}} = 150 \text{ mA}$)
- $t_{\text{off}}$ e.g. 0.07 msec ($I_{\text{load}} = 150 \text{ mA}$)

default settings: all pulse outputs inactive
- mode of operation: ‘if sync’

Accuracy of Pulses: better than $\pm 100$ nsec after synchronization and 20 minutes of operation
- better than $\pm 3 \mu$sec during the first 20 minutes of operation

Serial Ports: 3 independant asynchronous serial ports

COM0 (RS–232)
- Baud Rate: 300 up to 19200
- Framing: 7N2, 7E1, 7E2, 8N1, 8N2, 8E1, 801

COM1 (RS–232, optional RS–485)
- Baud Rate: 300 up to 19200
- Framing: 7N2, 7E1, 7E2, 8N1, 8N2, 8E1, 801

COM2 (RS–485)
- Baud Rate: 300 up to 19200
- Framing: 7N2, 7E1, 7E2, 8N1, 8N2, 8E1, 801

- time string selectable for COM0, COM1 and COM2
- possible stringtypes in chapter: Time Stings
default settings: COM0: 19200, 8N1
COM1, COM2: 9600, 8N1
‘standard Meinberg’
time string per second
mode of operation ‘if sync’

Time Code
Outputs: modulated via BNC-connector:
3 \text{ V}_{\text{PP}} \text{ (MARK), 1 \text{ V}_{\text{PP}} \text{ (SPACE) into 50\Omega}}

unmodulated via 16-pin terminal:
Field effect transistor with internal pull-up (1 k\Omega) to +5 V

Data of transistor:
U_{ds_{\text{max}}} = 100 \text{ V}, I_{d_{\text{max}}} = 150 \text{ mA}, P_{\text{max}} = 250 \text{ mW}

TTL into 50\Omega
RS422

DCF77-Emulation: AM-modulated 77.5 kHz carrier frequency
usable as replacement for a DCF77 antenna
output level approximately -55 dBm (unmodulated)

Power Requirements: GNS165/DHS
20-60 \text{ V DC}
DC-isolation 1.5 \text{ kV DC}

GNS165/DAHS
100-240 \text{ V DC}
100-240 \text{ V AC, 50-60 Hz}
Fuse: 630 mA

Dimension: GNS165/DHS
105 \text{ mm x 85 mm x 104 mm (height x width x depth)}

GNS165/DAHS
105 \text{ mm x 125.5 mm x 104 mm (height x width x depth)}

Connectors: SMA connector for Multi-GNSS connection, AM modulated
DCF77 output and modulated time code output
16-pole terminal block for connection of:
- pulse outputs
- power supply (GNS165DHS and GNS165/AQ/DHS only)

DAHS, AQ/DAHS: 5pol. Screwterminal

Ambient Temperature: 0 \ldots 50^\circ \text{C}

Humidity: 85\% \text{ max.}

8.2 Time Strings

8.2.1 Format of the Meinberg Standard Time String

The Meinberg Standard Time String is a sequence of 32 ASCII characters starting with the STX (start-of-text) character and ending with the ETX (end-of-text) character. The format is:

<STX>D:dd.mm.yy;T:w;U:hh.mm.ss;uvxy<ETX>

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

<STX> Start-Of-Text, ASCII Code 02h

sending with one bit accuracy at change of second

dd.mm.yy the current date:

dd day of month (01..31)
mm month (01..12)
yy year of
the century (00..99)

w the day of
the week (1..7, 1 = Monday)

hh.mm.ss the current time:

hh hours (00..23)
mm minutes (00..59)
ss seconds (00..59, or 60 while leap second)

uv clock status characters (depending on clock type):

u: ‘#’ GPS: clock is running free (without exact synchr.)
PZF: time frame not synchronized
DCF77: clock has not synchronized after reset
(space, 20h)
GPS: clock is synchronous (base accuracy is reached)
PZF: time frame is synchronized
DCF77: clock has synchronized after reset

v: ‘*’ GPS: receiver has not checked its position
PZF/DCF77: clock currently runs on XTAL
(space, 20h)
GPS: receiver has determined its position
PZF/DCF77: clock is synchronized with transmitter

x time zone indicator:

‘U’ UTC Universal Time Coordinated, formerly GMT
‘CET’ European Standard Time, daylight saving disabled
‘S’ (CEST) European Summertime, daylight saving enabled

y announcement of discontinuity of time, enabled during last hour before discontinuity comes in effect:

‘!’ announcement of start or end of daylight saving time
‘A’ announcement of leap second insertion
(space, 20h) nothing announced

<ETX> End-Of-Text, ASCII Code 03h
8.2.2 Format of the SAT Time String

The SAT Time String is a sequence of 29 ASCII characters starting with the STX (start-of-text) character and ending with the ETX (end-of-text) character. The format is:

\(<\text{STX}>dd.mm.yy/w/hh:mm:ssxxxxuv<\text{ETX}>\)

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

- **dd.mm.yy** the current date:
  - **dd** day of month (01..31)
  - **mm** month (01..12)
  - **yy** year of the century (00..99)
  - **w** the day of the week (1..7, 1 = Monday)

- **hh:mm:ss** the current time:
  - **hh** hours (00..23)
  - **mm** minutes (00..59)
  - **ss** seconds (00..59, or 60 while leap second)

- **xxxx** time zone indicator:
  - ‘UTC’ Universal Time Coordinated, formerly GMT
  - ‘CET’ European Standard Time, daylight saving disabled
  - ‘CEST’ European Summertime, daylight saving enabled

- **u** clock status characters:
  - ‘#’ clock has not synchronized after reset
  - ‘ ’ (space, 20h) clock has synchronized after reset

- **v** announcement of discontinuity of time, enabled during last hour before discontinuity comes in effect:
  - ‘!’ announcement of start or end of daylight saving time
  - ‘ ’ (space, 20h) nothing announced

- **<CR>** Carriage Return, ASCII Code 0Dh
- **<LF>** Line Feed, ASCII Code 0Ah
- **<ETX>** End-Of-Text, ASCII Code 03h
8.2.3 Format of the NMEA 0183 String (RMC)

The NMEA String is a sequence of 65 ASCII characters starting with the ‘$GPRMC’ character and ending with the characters CR (carriage return) and LF (line-feed). The format is:

\[ \$GPRMC,hhmss.s,A,bbbb.bb,n,lllll.ll,e,0.0,0.0,ddmmyy,0.0,a*hh<CR><LF> \]

The letters printed in italics are replaced by ASCII numbers or letters where as the other characters are part of the time string. The groups of characters as defined below:

\$ Start character, ASCII Code 24h
sending with one bit accuracy at change of second

hhmmss.ss the current time:
  hh hours (00..23)
  mm minutes (00..59)
  ss seconds (00..59, or 60 while leap second)
  ss fractions of seconds (1/10 ; 1/100)

A Status (A = time data valid)
  (V = time data not valid)

bbbb.bb latitude of receiver position in degrees
leading signs are replaced by a space character (20h)

n latitude, the following characters are possible:
  ‘N’ north of equator
  ‘S’ south d. equator

lllll.ll longitude of receiver position in degrees
leading signs are replaced by a space character (20h)

e longitude, the following characters are possible:
  ‘E’ east of Greenwich
  ‘W’ west of Greenwich

ddmmyy the current date:
  dd day of month (01..31)
  mm month (01..12)
  yy year of the century (00..99)

a magnetic variation

hh checksum (EXOR over all characters except ‘$’ and ‘’)

<CR> Carriage Return, ASCII Code 0Dh

<LF> Line Feed, ASCII Code 0Ah
8.2.4 Format of the NMEA 0183 String (GGA)

The NMEA (GGA) String is a sequence of characters starting with the ‘$GPRMC’ character and ending with the characters CR (carriage return) and LF (line-feed). The format is:

\[
$GPGGA,\text{hhmmss.ss},\text{bbbb.bbbbb,n},\text{lllll.ll},e,A,vv,hhh.h,aaa.a,M,ggg.g,M,,0*cs<CR><LF>
\]

The letters printed in italics are replaced by ASCII numbers or letters where as the other characters are part of the time string. The groups of characters as defined below:

$  \quad \text{Start character, ASCII Code 24h}
\text{sending with one bit accuracy at change of second}

hhmmss.ss  \quad \text{the current time:}
    \begin{align*}
    \text{hh} & \quad \text{hours} \quad (00..23) \\
    \text{mm} & \quad \text{minutes} \quad (00..59) \\
    \text{ss} & \quad \text{seconds} \quad (00..59, \text{or 60 while leap second}) \\
    \text{ss fractions} & \quad \text{of seconds} \quad (1/10 \ ; 1/100)
    \end{align*}

A  \quad \text{Status} \quad (A = \text{time data valid})
    (V = \text{time data not valid})

bbbb.bbbbb  \quad \text{latitude of receiver position in degrees}
    \text{leading signs are replaced by a space character (20h)}

n  \quad \text{latitude, the following characters are possible:}
    'N' \quad \text{north of equator}
    'S' \quad \text{south d. equator}

lllll.llll  \quad \text{longitude of receiver position in degrees}
    \text{leading signs are replaced by a space character (20h)}

e  \quad \text{longitude, the following characters are possible:}
    'E' \quad \text{east of Greenwich}
    'W' \quad \text{west of Greenwich}

A  \quad \text{Position fix (1 = yes, 0 = no)}

vv  \quad \text{Satellites used (0..12)}

hhh.h  \quad \text{HDOP (Horizontal Dilution of Precision)}

aaa.h  \quad \text{Mean Sea Level altitude (MSL = altitude of WGS84 - Geoid Separation)}

M  \quad \text{Units, meters (fixed value)}

ggg.g  \quad \text{Geoid Separation (altitude of WGS84 - MSL)}

M  \quad \text{Units, meters (fixed value)}

cs  \quad \text{checksum (EXOR over all characters except '$' and '})}

<CR>  \quad \text{Carriage Return, ASCII Code 0Dh}

<LF>  \quad \text{Line Feed, ASCII Code 0Ah}
8.2.5 Format of the NMEA 0183 String (ZDA)

The NMEA String is a sequence of 38 ASCII characters starting with the ‘$GPZDA’ character and ending with the characters CR (carriage return) and LF (line-feed). The format is:

$GPZDA, hhmmss.ss, dd, mm, yyyy, HH, II*cs<CR><LF>
ZDA - Time and Date: UTC, day, month, year and local timezone.

The letters printed in italics are replaced by ASCII numbers or letters where as the other characters are part of the time string. The groups of characters as defined below:

$ Start character, ASCII Code 24h
sending with one bit accuracy at change of second

hhmmss.ss the current UTC time:
  hh hours (00..23)
  mm minutes (00..59)
  ss seconds (00..59 or 60 while leap second)

HH,II the local timezone (offset to UTC):
  HH hours (00..+-13)
  II minutes (00..59)

dd, mm, yyyy the current date:
  dd day of month (01..31)
  mm month (01..12)
  yyyy year (0000..9999)

cs checksum (EXOR over all characters except '$' and '*')

<CR> Carriage Return, ASCII Code 0Dh

<LF> Line Feed, ASCII Code 0Ah
8.2.6 Format of the Uni Erlangen String (NTP)

The time string Uni Erlangen (NTP) of a GPS clock is a sequence of 66 ASCII characters starting with the STX (start-of-text) character and ending with the ETX (end-of-text) character. The format is:

<STX>tt.mm.jj; w; hh:mm:ss; voo:oo; acdfg i;bbb.bbbbn ll.llllle hhhhm<ETX>

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

<STX> Start-Of-Text, ASCII Code 02h
sending with one bit accuracy at change of second

dd.mm.yy the current date:
dd day of month (01..31)
mm month (01..12)
yy year of the century (00..99)
w the day of the week (1..7, 1 = Monday)

hh.mm.ss the current time:
hh hours (00..23)
mm minutes (00..59)
ss seconds (00..59, or 60 while leap second)

v sign of the offset of local timezone related to UTC

oo:oo offset of local timezone related to UTC in hours and minutes

ac clock status characters:
a: ‘#’ clock has not synchronized after reset
   ‘ ’ (space, 20h) clock has synchronized after reset

c: ‘*’ GPS receiver has not checked its position
   ‘ ’ (space, 20h) GPS receiver has determined its position

d time zone indicator:
'S' CEST European Summertime, daylight saving enabled
   ' ' CET European Standard Time, daylight saving disabled

f announcement of discontinuity of time, enabled during last hour before discontinuity comes in effect:
'!' announcement of start or end of daylight saving time
   ‘ ’ (space, 20h) nothing announced

h announcenent of discontinuity of time, enabled during last hour before discontinuity comes in effect:
‘A’ announcement of leap second insertion
   ‘ ’ (space, 20h) nothing announced

i leap second insertion
   ‘L’ leap second is actually inserted
   ‘ ’ (space, 20h) no leap second is inserted

bbb.bbbn latitude of receiver position in degrees
leading signs are replaced by a space character (20h)
n latitude, the following characters are possible:
’N’ north of equator
‘S’ south d. equator

llllll longitude of receiver position in degrees
leading signs are replaced by a space character (20h)

e longitude, the following characters are possible:
‘E’ east of Greenwich
‘W’ west of Greenwich

hhhh altitude above WGS84 ellipsoid in meters
leading signs are replaced by a space character (20h)

<ETX> End-Of-Text, ASCII Code 03h
8.2.7 Format of the Computime Time String

The Computime time string is a sequence of 24 ASCII characters starting with the T character and ending with the LF (line feed, ASCII Code 0Ah) character. The format is:

```
T:yy:mm:dd:ww:hh:mm:ss<CR><LF>
```

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

- **T**: Start character
  - Sending with one bit accuracy at change of second

- **yy:mm:dd**: the current date:
  - **yy**: year of the century (00..99)
  - **mm**: month (01..12)
  - **dd**: day of month (01..31)

- **ww**: the day of the week (01..07, 01 = monday)

- **hh:mm:ss**: the current time:
  - **hh**: hours (00..23)
  - **mm**: minutes (00..59)
  - **ss**: seconds (00..59, or 60 while leap second)

- `<CR>`: Carriage Return, ASCII Code 0Dh
- `<LF>`: Line Feed, ASCII Code 0Ah
8.2.8 Format of the SYSPLEX-1 Time String

The SYSPLEX-1 time string is a sequence of 16 ASCII characters starting with the SOH (Start of Header) ASCII control character and ending with the LF (line feed, ASCII Code 0Ah) character.

Please note:
To receive the Timestring on a selected terminal correctly you have to send a "C" (once, without quotation marks).

The format is:

\[
<\text{SOH}>\text{ddd}:\text{hh}:\text{mm}:\text{ss}q<\text{CR}><\text{LF}>
\]

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

\[
<\text{SOH}> \quad \text{Start of Header (ASCII control character)}
\]
\[
\text{sending with one bit accuracy at change of second}
\]
\[
\text{ddd} \quad \text{day of year} \quad (001..366)
\]
\[
\text{hh:mm:ss} \quad \text{the current time:}
\]
\[
\text{hh} \quad \text{hours} \quad (00..23)
\]
\[
\text{mm} \quad \text{minutes} \quad (00..59)
\]
\[
\text{ss} \quad \text{seconds} \quad (00..59, or 60 while leap second)
\]
\[
\text{q} \quad \text{Quality indicator}
\]
\[
(\text{space}) \quad \text{Time Sync (GPS lock)}
\]
\[
(?) \quad \text{no Time Sync (GPS fail)}
\]

\[
<\text{CR}> \quad \text{Carriage-return (ASCII code 0Dh)}
\]

\[
<\text{LF}> \quad \text{Line-Feed (ASCII code 0Ah)}
\]
8.2.9 Format of the SPA Time String

The ABB SPA Time String is a sequence of 32 ASCII characters starting with the characters ">900WD" and ending with the <CR> (Carriage Return) character. The format is:

>900WD:jj-mm-tt_hh.mm;ss.fff:cc<CR>

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

jj-mm-tt  the current date:
\begin{itemize}
\item jj year of the century (00..99)
\item mm month (01..12)
\item tt day of month (01..31)
\end{itemize}

 Space (ASCII-code 20h)

hh.mm;ss.fff the current time:
\begin{itemize}
\item hh hours (00..23)
\item mm minutes (00..59)
\item ss seconds (00..59, or 60 while leap second)
\item fff milliseconds (000..999)
\end{itemize}

cc Checksum. EXCLUSIVE-OR result of the previous characters, displayed as a HEX byte (2 ASCII characters 0..9 or A..F)

<CR> Carriage Return ASCII Code 0Dh
8.2.10 Format of the RACAL standard Time String

The RACAL standard Time String is a sequence of 16 ASCII characters terminated by a X (58h) character and ending with the CR (Carriage Return, ASCII Code 0Dh) character. The format is:

\[ <X><G><U>yymmddhmmss<CR> \]

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

- **<X>** Control character, code 58h
  - sending with one bit accuracy at change of second

- **<G>** Control character, code 47h

- **<U>** Control character, code 55h

- **yymmddd** the current date:
  - yy year of the century (00..99)
  - mm month (01..12)
  - dd day of month (01..31)

- **hh:mm:ss** the current time:
  - hh hours (00..23)
  - mm minutes (00..59)
  - ss seconds (00..59, or 60 while leap second)

- **<CR>** Carriage Return, ASCII code 0Dh

Interface parameters: 7 Databits, 1 Stopbit, odd Parity, 9600 Bd
8.2.11 Format of the Meinberg GPS Time String

The Meinberg Standard Time String is a sequence of 36 ASCII characters starting with the STX (start-of-text) character and ending with the ETX (end-of-text) character. Contrary to the Meinberg Standard Telegram the Meinberg GPS Timestring carries no local timezone or UTC but the direct GPS time without conversion into UTC. The format is:

<STX>D:tt.mm.jj;T:w;hh.mm.ss;uvGy;lll<ETX>

The letters printed in *italics* are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

<STX> Start-Of-Text (ASCII code 02h)

*tt.mm.jj*  the current date:

*tt* day of month (01..31)

*mm* month (01..12)

*jj* year of the century (00..99)

*w* the day of the week (1..7, 1 = monday)

*hh.mm.ss* the current time:

*hh* hours (00..23)

*mm* minutes (00..59)

*ss* seconds (00..59, or 60 while leap second)

*u* clock status characters:

*u:* '#' clock is running free (without exact synchr.)

   (space, 20h)

   clock is synchronous (base accuracy is reached)

v: '*' receiver has not checked its position

   (space, 20h)

   receiver has determined its position

*G* time zone indicator 'GPS-Time'

*y* announcement of discontinuity of time, enabled during last hour

before discontinuity comes in effect:

'A' announcement of leap second insertion

   (space, 20h) nothing announced

*lll* number of leap seconds between UTC and GPS-Time

   (UTC = GPS-Time + number of leap seconds)

<ETX> End-Of-Text, (ASCII Code 03h)
8.2.12 Format of the ION Time String

The ION time string is a sequence of 16 ASCII characters starting with the SOH (Start of Header) ASCII control character and ending with the LF (line feed, ASCII Code 0Ah) character. The format is:

\(<\text{SOH}>\text{ddd:hh:mm:ssq}<\text{CR}><\text{LF}>\)

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

- `<SOH>` Start of Header (ASCII control character) sending with one bit accuracy at change of second
- **ddd** day of year (001..366)
- **hh:mm:ss** the current time:
  - **hh** hours (00..23)
  - **mm** minutes (00..59)
  - **ss** seconds (00..59, or 60 while leap second)
- **q** Quality indicator (space) Time Sync (GPS lock)
  - (?) no Time Sync (GPS fail)
- `<CR>` Carriage-return (ASCII code 0Dh)
- `<LF>` Line-Feed (ASCII code 0Ah)
8.2.13 Format of the ION Blanked Time String

The ION Blanked time string is a sequence of 16 ASCII characters starting with the SOH (Start of Header) ASCII control character and ending with the LF (line feed, ASCII Code 0Ah) character. The format is:

```
<SOH>ddd:hh:mm:ssq<CR><LF>
```

Attention: Interval of the String: 2min. 30 seconds every 5 minutes.

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

- `<SOH>` Start of Header (ASCII control character) sending with one bit accuracy at change of second
- **ddd** day of year (001..366)
- **hh:mm:ss** the current time:
  - **hh** hours (00..23)
  - **mm** minutes (00..59)
  - **ss** seconds (00..59, or 60 while leap second)
- **q** Quality indicator (space) Time Sync (GPS lock) (?) no Time Sync (GPS fail)
- `<CR>` Carriage-return (ASCII code 0Dh)
- `<LF>` Line-Feed (ASCII code 0Ah)
8.2.14 Format of the IRIG J Time String

The time code consists of ASCII characters, send in the format 701

- 1 start bit
- 7 data bits
- 1 parity bit (odd)
- 1 stop bit

The on-time marker is represented by the leading edge of the start bit. The time code consists of 15 characters, sent once per second at a baud rate of 300 or greater. The format is:

\(<\text{SOH}\>\text{DDD:HH:MM:SS}\text{<CR><LF}>\)

The letters printed in italics are replaced by ASCII numbers whereas the other characters are part of the time string. The groups of characters as defined below:

SOH ASCII code „Start of Heading“ (0x01h)
DDD ordinal date, day of year (1 to 366)
HH, MM, SS time of the start bit given in hour (HH), minute (MM), second (SS)
CR ASCII code „Carriage Return“ (0x0Dh)
LF ASCII code „Line Feed“ (0x0Ah)
Oscillators available for Meinberg GPS Receivers / Time Servers:
OCXO, TCXO, Rubidium

</table>

**Note 1:** The accuracy in Hertz is based on the standard frequency of 10 MHz.

For example: Accuracy of TCXO (free run one day) is ±1 \(10^{-7}\)·10MHz = ± 1 Hz

The given values for the accuracy of frequency and time (not short term accuracy) are only valid for a constant ambient temperature! A minimum time of 24 hours of GPS-synchronicity is required before free run starts.
9 WEEE Compliance

Compliance with EU Directive 2011/65/EC (RoHS)

We hereby declare that this product is conform to the European Directive 2011/65/EC, "Restrictions of Hazardous Substances in Electrical and Electronic Equipment". We ensure that electrical and electronic products sold in the EU do not contain lead, cadmium, mercury, hexavalent chromium, polybrominated biphenyls (PBBs), and polybrominated diphenyl ethers (PBDEs) above the legal threshold.

WEEE status of the product

This product is handled as a B2B (Business to Business) category product. In order to secure a WEEE compliant waste disposal it has to be returned to the manufacturer. Any transportation expenses for returning this product (at its end of life) have to be incurred by the end user, whereas Meinberg will bear the costs for the waste disposal itself.
