## TCR180: Time Code Receiver and Generator (Eurocard)

IRIG or AFNOR time code generator and receiver with various time code output signals

### Key Features

- 2 time-trigger inputs
- Unmodulated outputs with TTL level
- RS-232 interface
- Status LED
- Time information coded in IRIG-A/B or AFNOR format
- High accurate sinewave carrier for modulated output

### Description

The TCR180 serves to decode and generate modulated (AM) and unmodulated (DC Level Shift) IRIG-A/B/G, AFNOR, C37.118 or IEEE1344 time codes. AM-codes are transmitted by modulating the amplitude of a sine wave carrier, unmodulated codes by variation of the width of pulses.

As standard the module TCR180 is equipped with a TCXO (Temperature Compensated Xtal Oscillator) as master oscillator to provide a high accuracy in holdover mode of  $\pm 1 \cdot 10^{-8}$ . Optionally an OCXO (Oven Controlled Xtal Oscillator) is available for better accuracy.

#### Time Code Receiver:

Automatic gain control within the receive circuit for unmodulated codes allows decoding of IRIG-A/B/G, AFNOR, C37.118 or IEEE1344 signals with a carrier amplitude of 600 mVpp to 8 Vpp. The input stage is electrically insulated and has an impedance of either 50 ohm, 600 ohm (standard) or 5 kohm, selectable by a jumper.

DC Level Shift Input insulated by optocoupler with internal series resistance of 220 ohm..

#### Time Code Generator:

The generator of TCR180 is capable of producing time codes in IRIG-A/B/G, AFNOR, C37.118 or IEEE1344 format. The codes are available as modulated (3 Vpp / 1 Vpp (MARK/SPACE) into 50 ohm) and unmodulated (DC Level Shift) signals (TTL into 50 ohm).

Regarding time code and its offset to UTC, the receiver and the generator can be configured independently. Thus TCR180 can be used for code conversion. As an option the module can be delivered with optical inputs/outputs (Time Code DCLS) instead of the modulated signal paths.
